

Regulations and Standards of Health Food in China

Health Food Import License applications must conform to the following regulations and standards:

1) Functional evaluation procedures and examination methods for health food: Functional testing on animals or humans must be done based on the examination methods provided by Chinese government regulations. Whether the application product has function or not is determined by its evaluation procedure.

2) Toxicological testing procedures and methods for food safety:

Toxicological testing should be done based on this regulation. The product must be confirmed not to have acute, sub-acute or chronic hazards.

3) Food Hygiene Standards of China and General Requirements on Health Food Hygiene:

Laboratory testing must be done according to Chinese government regulations. Imported health food must comply with these requirements.

4) Regulations for health food labeling and general standard of China on food labeling:

The label and use introduction of the product must comply with these two regulations.

5) Technical evaluation rules for health food and rule for the application and acceptance for health food:

If applying for an Approved Code Number and Certificate of Health Food, the applicant must conform to the procedures provided by Chinese regulations.

6) Good Manufacturing Practices for health food companies:

The health food enterprise must meet all requirements of Good Manufacturing Practices.
